Produced by the NC Central Cancer Registry, 02/2025

\*\*Cancer mortality rates based on any cancer deaths less than 16 are suppressed as they are not stable.

Cases may not sum to totals due to unknown values.

Rates are calculated using vintage 2019 non-bridged population estimates for 2018-2019 (based on the 2010 Census), and vintage 2023 non-bridged population estimates for 2020-2022 (based on the 2020 Census).

Age-adjusted rates are point estimates. The standard error (SE) for an age-adjusted rate defines the variability in this point estimate. 95% Confidence Interval (CI) based on a formula for estimating the (SE) is provided to illustrate how precise an estimate is; the wider the CI range, the less precise the estimate and the more the estimate could vary. Age-adjusted rates for two different populations are significantly different when 95% confidence intervals for their age-adjusted rates do not overlap. CI should be framed in the following statement: We are 95 percent confident that the age-adjusted rate for the given population is between Lower\_CI and Upper\_CI.
