The N.C. Child Health Assessment and Monitoring Program (CHAMP) survey was first developed in the fall of 2004 and implemented in January 2005. CHAMP is the first survey of its kind in North Carolina to measure the health characteristics of children from birth to age 17. CHAMP is a follow-back survey to the BRFSS (Behavioral Risk Factor Surveillance System) which is a telephone survey of adults, ages 18 and older. All adult respondents with children living in their household are invited to participate in the CHAMP survey. One child is randomly selected from the household and the adult most knowledgeable about the health of the selected child is interviewed in a follow-up survey. All questions about the selected child are answered only by the most knowledgeable adult. CHAMP surveys are revised each year to meet the child health surveillance needs of North Carolina. In 2006, nine questions on the topic of child safety and injury were asked of nearly 3,200 parents. Results shown above are based on data from 2006. See the N.C. CHAMP website for more information and data limitations: www.schs.state.nc.us/SCHS/champ.
