

Children Insured Through NC Health Choice (Ages 6 to 17 Years)

— North Carolina 2007–2009

December 2010

Ninety-four percent of parents surveyed in North Carolina reported that their child (ages 6 to 17 years) is currently covered under some type of health insurance plan. Among children currently insured, 6 percent are covered through NC Health Choice (known as CHIP [Child Health Insurance Program] at the Federal level), a free- or reduced-price health care program for children ages 6 to 17 years. This report compares demographic characteristics, health care, and health status of children with health care coverage through NC Health Choice to all children in the state, ages 6 to 17 years. All statistics are based on parental report.

		NC Health Choice %	State %
Demographic Characteristics			
Racial Background	White	48.5	65.0
	African American	33.5	22.4
	Other Racial Background	18.0	12.5
Ethnicity	Hispanic	13.6	9.5
Parental Education	Less Than High School Education	13.9	6.4
	High School Degree	30.1	18.3
	Some College Education	34.0	25.3
	College Degree	22.0	50.0
Health Care			
Insurance Coverage Consistency	Lacking Consistent Insurance Coverage in Past Year	14.5	7.6
Usual Source of Care	Most Often Visit a Doctor's Office	81.9	86.8
	Most Often Visit a Public Health Center	8.8	4.9
	Most Often Visit a Hospital (Outpatient, Emergency Room, Urgent Care)	9.1	6.6
Personal Doctor	Health Professional Who Knows the Child Well and is Familiar with the Child's Health History	81.3	81.2
Preventive Health Care	Preventive Medical Visit in the Past Year	76.0	78.8
Health Status			
General Health	Parental Rating of Fair or Poor Health	5.5	4.1
Asthma	Told by Doctor that Child has Asthma (Current)	11.7	10.4
Special Needs	Elevated Need for Medical Care, Mental Health, or Educational Services Due to a Chronic Medical, Behavioral, or Other Health Condition	13.9	11.7
Weight Status [†]	Overweight (Ages 10–17 Years)	21.4	18.0
	Obese (Ages 10–17 Years)	25.5	15.5

* For a detailed report, see: Miles DR, Sexton CM, Margolis LH, Sanderson M. Children's health care coverage and children's health 2007–2009: A report from the North Carolina Child Health Assessment and Monitoring Program. Raleigh, NC: North Carolina Department of Health and Human Services, October 2010. Available at: www.schs.state.nc.us/SCHS/pdf/CHAMP_Health_Care_Report_2007-09.pdf.

[†] Weight status is estimated from parental report of height and weight, and based BMI percentiles calculated from the 2000 CDC growth charts by age and sex and defined as: overweight = BMI between 85th to 94th percentile, obese = BMI ≥ 95th percentile. Several procedures are used to increase accuracy of parental report of child's height and weight including a height/weight follow-up. Please see full report for further details.

Key Findings

Demographic Characteristics

- ▶ Minorities are more likely to be covered through NC Health Choice. One-third of children covered by NC Health Choice are African American and one-fifth are of other racial background, compared to 22 percent and 12 percent of all children. Fourteen percent of children covered by NC Health Choice are Hispanic, compared to 10 percent of all children.
- ▶ Parents of children covered by NC Health Choice are more likely to have less than a high school education (13.9% vs. 6.4%) and less likely to have a college degree (22.0% vs. 50.0%).

Health Care

- ▶ Parents of children currently enrolled in NC Health Choice are twice as likely to report that their child has had discontinuous health care coverage during the past 12 months (14.5% vs. 7.6%). This may be due in part to the annual re-enrollment process and attendant documentation required for NC Health Choice, while children covered by other types of health insurance programs are not required to re-enroll each year.

Health Status

- ▶ Children with NC Health Choice are more likely to be overweight or obese; based on parental report, nearly half of children with NC Health Choice (47%) are overweight/obese compared to one-third of all children.

This report includes data collected from 2007 to 2009 on 5,632 parental surveys of children ages 6 to 17 years from the North Carolina Child Health Assessment and Monitoring Program (NC CHAMP), a surveillance system that collects information about the health characteristics of children ages 0 to 17 years. NC CHAMP is a follow-up survey of the Behavioral Risk Factor Surveillance System (BRFSS), a telephone survey of adults (18 years and older). All adult respondents with children living in their household are invited to participate in NC CHAMP. One child is randomly selected from the household and the adult most knowledgeable about the health of the selected child is interviewed. Percentages are weighted to population characteristics. For further information about NC CHAMP, please visit www.schs.state.nc.us/SCHS/champ or contact CHAMPstaff@dhhs.nc.gov.
