1 Based on 2007 estimates from the 2007 Vintage National Center for Health Statistics Bridged Population Estimate file.

2 Except for the infant death rate, mortality rates are age-adjusted per 100,000 population. Denominators for the mortality rates (except for infant deaths) are based on 2003-2007 estimates from the Vintage 2007 National Center for Health Statistics Bridged Population Estimate file.

3 Rates per 1,000 live births. The infant mortality data are derived from the consolidated infant death file which matches all infant deaths to their live birth records. Figures presented here may not match those published in other reports due to the use of the matched infant death file.

4 Birth data are derived from information collected via birth certificates filed with the state.

Pregnancy data is derived from birth certificate, fetal death certificate, and induced abortion forms filed with the state. Teen pregnancy rates represent the number of births, fetal deaths, and induced abortions per 1,000 women ages 15-19.

5 N.C. 2007 HIV/STD Surveillance Report. NC DHHS HIV/STD Prevention & Care Branch. Rates are per 100,000 population. <http://www.epi.state.nc.us/epi/hiv/pdf/std07rpt.pdf>

6 Latest available data from the North Carolina Behavioral Risk Factor Surveillance System (NC BRFSS).

* Rates based on fewer than 20 cases may be statistically unstable and should be interpreted with caution.
